# PRESERVED TREES & PLANTS

---

## What **are** preserved trees and plants ?

### 100% natural

All preserved products are real. They are natural plants that have been treated with a bio - degradable formula.

### Preserved to last for years

Our unique process, developed with vegetable - based glycerin, replaces the humidity within the plant with a component that does not evaporate and thereby preserve beauty over time.

### Cost-effective

Our preserved trees last for years and significantly lower the need for re - purchasing.

### Easy to maintain and install

The products do not require light or water, leading to significant savings in installation and maintenance.

### Powerful addition to traditional solutions

The preserved products can be successfully mixed with fresh or artificial plants for complete design freedom to generate different environments and effects.

### Respectful with the environment

The preserved plants are more environmentally friendly than fresh cut flowers due to their long life and low energy consumption for transport and storage. The result is a significantly lower carbon footprint than fresh or artificial flowers. Help care for the environment ... One plant at the time.

Last for years

100% natural

No light or water required

## What preserved trees and plants **are not** ?

### They are not freeze dried (lyophilized) or dehydrated products

None of the products use freeze - drying for their preservation. The lyophilization suppresses important characteristics of the fresh product for a living appearance.

### They are not growing

To ensure that the plant is at its best and maintain the appearance of a living plant, the preservation process stops any biological process that promotes the aging of the plant.

### They are not artificial

Although the product undergoes a transformation process that stabilizes the natural plant, our process does not include any of the typical components in artificial flowers such as plastic or synthetic fabrics.

### They are not toxic

All our products are designed for daily contact with pets and people. They do not pose a health risk.

## MAINTENANCE AND CARE

---

To remove dust, clean regularly with a dry or slightly damp cloth/duster or apply compressed air at low power and low temperature. Once free of dust, anti-static polish sprays with paraffin / wax base can be added.

- For indoor use only.
  - Do not water.
  - Avoid direct and prolonged exposure to sunlight.
  - Avoid prolonged exposure to high humidity (greater than 80%).
  - Avoid crushing, pressing or folding foliage or flowers.
-
